Unlike CAD programs that used to create architectural drawings based on drawings, AutoCAD has a full dimensional nature. Using the features of AutoCAD, users are able to create drawings and dimensions within the space. AutoCAD and drawing tools The following is a list of the AutoCAD drawing tools and functions that you can use to create a paper space drawing. X,Y Axis Drawing Grid : AutoCAD is the leading vector-based drafting application. It is very helpful in creating paper space drawings as it includes a built-in grid that is a blue line on the paper. This line follows the X and Y axis and does not move with the paper. This helps to keep the drawing as well as the paper in a straight line. Using the XYZ Ticks : This is one of the most convenient features of AutoCAD. It is automatically placed every few inches on the X and Y axis. It is useful for creating precise paper space drawings, especially those having large sheet sizes. For example, a sheet of construction paper may measure 2400 x 6000 mm (20 x 40 feet). A CAD engineer may use the X axis, Y axis, and the Z axis to create a drawing with precision. The CAD engineer can then cut out the X and Y axis and use them to precisely cut out the paper for a drawing. Drawer : Drawer is one of the most important tools for a drafting engineer. It allows drawing and dimensioning of the paper. The drawing area is in fact paper, so it is easy to draw or dimension within the space. Erase : An AutoCAD drawing is similar to a large, white sheet of paper. When it is erased, the white background is gone. You can erase parts of a drawing or a whole drawing. Erasing is similar to erasing a chalkboard. Export and Import : You can save a drawing or dimension as a DWG file. You can also import an imported drawing and make necessary changes to a drawing. Zoom : You can zoom in and zoom out to make your drawing more understandable. Data Window : In AutoCAD, the data window is where you can enter data such as the
