Web images are a great tool to put on a website for search engines to find. Many websites offer web design training that teaches Photoshop. **Web graphic design:** `www.web-design-school.com/` ## Using ImageMagick to Create Images ImageMagick is a great program for anyone who wants to create or enhance images. ImageMagick is used for all sorts of image tasks, including image processing and creating and editing graphic files. It's also great for vector images, which are created by the various commands that modify an image; for example, creating paths, adjusting the shapes and edges, and enlarging or reducing an image. You can download ImageMagick from the website (`www.imagemagick.org`). You can perform most of the image processing functions on the Mac by using the Apple menu and selecting **ImageMagick**. The following steps show you how to convert your image file to a web-friendly format (JPG) and, if necessary, resize the file to the size you want. To convert a JPEG image, just choose File⇒Convert. Then from the command line type the following: `convert filename.jpg filename.jpg` Use the following code to resize an image: `convert filename.jpg -resize 75% filename.jpg` Don't forget to drop the quotations around the filename. The resize command can work by inserting a value of pixels, inches, or centimeters. For example, the above command specifies the percentage of pixels that the image will be resized to. **Best:** You can also download the ImageMagick suite from the Mac App Store. It's a nice app to use in conjunction with Photoshop. Get the ImageMagick suite from the Mac App Store at ` ## Compressing Images for Web Accessibility When working with images that are destined for the Web, you'll want to compress those images so

Tour of the Nickel Mines Conquistador Trail Area Explore the historic mining town of Nickel Mines and the site of former Nickel Bar (where slaves used to mine the ore). Along the way, you'll pass from a blacksmith shop, to a caboose, to a mine shaft. You'll also cross the Dickeyville Road and the Sullivan Gulch, a naturally occurring rock formation. Hiking on the Trail of History Whether you want to explore the past of the town, or just take a scenic stroll along one of the natural trails, there are ways to do it all. Begin at the new trailhead for the Long Trail near Montcalm Cemetery. Continue through 20-acre Eastern Cemetery and stop to look at some of the stones, and think about the life of each deceased. We'll even offer up clues about how a person died as you explore the cemetery. Weather permitting, you'll continue a short hike to the beginning of the trail that follows the Walker River. You'll hike along the stream, and even scramble up the embankment if you want to. You'll be rewarded with fantastic views of the river and the town. To travel the short distance to the trailhead that leads to the old mine shaft, follow the path that ends near the old Allen Mine site. Walk through the man cave to see the old-style furnace, and climb to the top of the hill to view the original tunnel for the Sullivan Mine. Below, you'll walk up the old

In the manufacture of automobile bodies, automobile chassis and other articles of manufacture, methods of electroplating are commonly used to finish products such as automobiles and other products, after the product has been formed. Such electroplating includes various pretreatments and plating operations such as cleaning, roughening or etching, typically followed by a step in which the product is immersed in an electroplating solution which is at a predetermined pH. The product is typically rinsed after the immersion and is then subjected to a post-rinse to remove excess electroplating solution from the product. The post-rinse typically utilizes a two-stage process in which the product is moved through a bath containing a stripping solution which is maintained at a temperature above the desired temperature for plating. The bath also contains a chelating or sequestrating agent such as a polyamine resin, and a metal ion selected from the group consisting of zinc, aluminum, magnesium, tin and lead. The post-rinse bath is typically maintained at a temperature of between 30.degree. to 50.degree. C. The conventional post-rinse is intended to remove the acidic solution and undesirable impurities
